1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-44 and 76-77, drawn to radiation alarm, classified in class 340, subclass 600.
  - II. Claims 45-75 and 78-79, drawn to network signaling, classified in class 340, subclass 286.11.
  - III. Claims 880-123, drawn to radiation sensor module, classified in class 250, subclass 370.01.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a mobile device with the capability of detection radiation and provides warning to the mobile device's user, while invention group II uses a wide area communication system to receive information from and distribute information to a plurality of mobile devices and invention group III claims a radiation sensor module that can be used in a mobile device. See MPEP § 806.05(d).
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
